

Perfect Farming Systems
Fascinating, successful and animal friendly

SCHAUER[®]
PERFECT FARMING SYSTEMS

Perfect Farming Systems

Competitive edge through technology leadership with an eye on the whole

PERFECT FARMING SYSTEMS *from the house of Schauer*

Schauer's traditional motto was: „Always one idea ahead“. And it was never simply a catchphrase. The keen aspiration for innovation has resulted in market and technologically leading products such as Compident Electronic Sow Feeding and Spotmix multi-phase feeding. Schauer Agrotronic is now seen as being a global „specialist“ in feeding technology. At the same time, our expertise for the implementation of sophisticated products has also developed, however. The aspirations of our customers increasingly extend beyond requiring „specialists“ in core areas. Accordingly, we are now

able to plan and implement „PERFECT FARMING SYSTEMS“ which operate on a sustainable and reliable basis during daily operations and therefore earn more money.

We are pleased to be able to present the company SCHAUER with „PERFECT FARMING SYSTEMS“. The core competencies of innovation and animal welfare as well as the sustainability and cost-efficiency of the products and solutions are combined to create the perfect solution: „PERFECT FARMING SYSTEMS“, for a promising future for successful farmers – worldwide.

PERFECT FARMING SYSTEMS

Success and animal
welfare unified

*Productive &
profitable*

Efficient planning concepts guarantee the successful implementation of your project for pigs, cattle and horses.

Individual basic concept planning

No matter whether new buildings, conversions or additional structures are to be ideally adapted to the local conditions, personal or functional requirements of our clients. Professional detailed plans, such as foundation plans, sectional drawings, installation plans and therefor necessary installation sheets and assembly instructions make possible a smooth implantation of the stable building projects.

TOP FARM concept project planning

With Schauer TOP FARM you receive a comprehensive farm concept for rising to become one of the best animal production businesses. We will develop for you an individual solution that is tailored precisely to your requirements. We work out Schauer TOP FARM concept on the basis of your production targets including all necessary resources and zootechnical process descriptions.

Professional planning and project development

Cornerstone of success in the livestock production

Highest quality standard

in production and in every detail of the products

Modern production systems according to the latest technological standards

From the very first minute there was a focus on a vision of the labour-saving and animal-friendly premium quality stable technology generating and marketing.

Series and individual animal housing equipment is produced precisely, CNC controlled and on the highest

quality standard. Internal quality control and documentation guarantee the high quality of all components. This provides above average durability and functionality for trouble-free, continuous use of our products for customers from all over the world.

Innovative labour-saving and animal-friendly products

for professional pig farming reduce the work input and increase productivity and thus the success

Stable in value housing systems for successful pig farms

The company Schauer has a tradition of the development and production of high-quality pig-housing systems for more than 6 decades. We think and act locally. The basis of our experiences is formed by the best practice systems of the international pig farms. Proximity to the farmer and our claim to achieve the highest customer satisfaction gave rise to the innovative, labour-saving and profitable housing systems.

The designing and dimensioning of the pig stall facility is here largely orientated towards the performance targets of the pig producers and the requirements for the animal-friendliness and sustainability of the production systems. For Schauer "Animal Welfare" is not just a modern slogan, but it's a mission, which is being implemented for more than 30 years with outstanding animal-friendly solutions, as seen in the example of Compident electronic feeding system.

Optimize the performance and save the feed costs!

For more than 4 decades, Schauer has been developing and producing its own automatic feeding systems for pig farming. Whether for pigs, cattle, horses or fish – all systems combine the latest technologies with extreme reliability and long service life. With its remarkable innovations, Schauer has acquired a global reputation as a technological leader in many segments of electronic feeding systems.

For more than 40 years, Schauer has been calling the tune in feed technology for professional and successful pig feeding with Liquimix liquid feeding system, for 30 years with Com-pident electronic feeding system and for more than 20 years with Spotmix multiphase feeding system.

The DLG-awarded innovations such as Dryfeed Batch also underline Schauer's expertise and high quality requirements in dry feed. New FarmManager for online animal management and user-friendly smart applications is a modern control tool for a successful livestock farming.

We set the standards in the feeding technology

More successful with system: animal-friendly, functional and labour-saving!

The highest functionality and long life of the cattle stall equipment produced by Schauer Agrotronic have made Schauer the market leader in Austria. Our superior planning competency in developing and implementing family cattle farms through to large-scale structures in Eastern Europe guarantees our customers the highest possible working efficiency and functionality of cattle farming systems.

For decades reliable spare parts supply through own production guarantees an exceptionally long service life of the stall equipment.

More quality of life and labour efficiency with your cattle stall

Innovative solutions for higher performance and feed costs saving

Innovative solutions for higher performance and feed costs saving

The quality of the cattle feeding system essentially decides the costs and performances in dairy cattle husbandry and cattle fattening.

Schauer proves its solution competence also in the field of automatic cattle feeding. We provide a broad range of products for animal individual supply of concentrate and group-specific automatic feeding by TMR-robots. Thereby we have our eyes not only on a high functionality of technical equipment, but also on its minimal energy consumption and high wear resistance for its trouble-free continuous use. Let us know your requirements and we'll be happy to advise you.

Active Horse Systems – Schauer Agrotronic horse stables

make hearts of the horse owners,
stable managers and horses beat faster

Innovative and horse-friendly active open and box stables

With „Active Horse Systems“ from Schauer you are on the winning side. With the „Hellbrunn“, „Schönbrunn“ and „Belvedere“ box types, Schauer box stables bring poetry to individual horse rearing in the highest quality, Austrian tradition. A range of accessories as well as automatic manure removal and littering systems relieve the work in the horse box stable.

In the area of active stables, Schauer is a leading pioneer and combines a high level of expertise in the development and production of automatic feeding systems with the specialist knowledge and passion of our expert advisers – for the optimum planning of your open stable. Compident Electronic Horse Feeding stations are available for providing the horses with concentrated feed and roughage on an individual basis.

Highest efficiency – saves time and feed costs

The standard solution in the area of fish feeding consists of automatic feeding machines which are installed in the ponds on a decentralized basis and distribute the feed either directly through the activity of the fish, or on the basis of time control and/or sprinkle the feed into the water. Spotmix Fish is a fully automatic centralized feeding system which distributes the recipe and quantity-adjusted feed portions to the individual feeding points over up to 800 m. The quantities of feed are specified according to need on the basis of feeding curves.

The consumption levels of the fish vary, however, due to differing water temperatures that depend on the season and the weather conditions. Therefore, with Spotmix Fish, this has been automated with a „sensor detection via temperature sensors.“ The supply of speed can therefore be ideally adapted to the actual needs of the fish automatically and at all times. This avoids considerable feed losses and costs, as well as increases revenues.

SpotmixFish

revolutionizes the automatic fish feeding

We are our clients' companions – throughout whole service life!

Our high quality of service creates trust

Service and customer support – worldwide at your disposal

We are always there for you! Precise assembly, reliable service and spare parts supply – guaranteed over 20 years – also in the field of electronics.

High quality of our products is only with a high service quality complete

Our trained service technicians, sales and service partners support our customers from assembly and up to aftercare.

User-friendly design of our software for feeding, manure removal and climate control equipment in conjunction with online remote maintenance enables us to solve our customers' problems (if the occasion arises) swiftly, quickly and un-bureaucratically all over the world and at any time, quasi „to be present directly on site and to speak every language“. With the online support we help our customers to avoid beginner's operating errors and to enable optimal operation of the equipment from the very beginning.

With the offer of service and maintenance contracts we can realize the optimisation of equipment and problem-free operation for a long service life.
