

WelCon

For organic production

Welfare for animals - Convenience for people

WelCon farrowing pen is clearly separated into the functional zones for feeding, lying and manure placing. The sow reaches 50 cm wide feeding corridor only from the outside. It gets to the lying area through the side door of the feeding corridor. In the lying area are also located a piglet nest and a feeding zone for piglets. If the sow pushes the exit door outwards, it gets to the outside area. In the feeding area the sow can be fixed for a short time (personal protection).

The piglet nest, the feeding trough for the sow and the piglets feeding zone can be comfortably reached from the service corridor. It is easy to fix the piglets for treatment purposes with one simple manual action.

Developed together with the Institute for Biological Agriculture Raumberg Gumpenstein

Prefabricated house for organic pig farming – turnkey
