

# STROHMATIC LIGHT 80

INNOVATIVE LITTERING SYSTEM WITH  
AUTOMATIC DISTRIBUTION

Automatic dust removal is patent pending!

Efficient and cost effective distribution of organic enrichment

## MINIMUM OF WORKING TIME AND MAXIMUM OF TIME SAVING

### **Strohmatic light 80 - the innovation of the year for littering and automatic, and cost effective distribution of organic enrichment in pig stables**

Offering the pigs organic activity material for enrichment is the order of the day. Either it is to fulfill legal requirements or simply to implement more animal welfare in pig farming. Normally, this can only be achieved with increased working time.

With the new development Strohmatic light 80 it is possible to loosen up straw that has already been mulched from the field and packed into large bales and to distribute it to the desired discharge points in the barn, by using a chain system with 80 mm or 200 mm diameter.

With the new system the distribution points can be supplied all together very easily with chopped straw with a fiber length of up to 80 mm via storage boxes of 15 liters each.

Depending on the number of litter intervals, the straw can be used as activity material for enrichment or as litter for the lying area. The distribution takes place automatically and time-controlled and saves the farmer daily, depending on the size of the plant, one or two hours of working time.

**The Strohmatic light 80 is of course also perfectly suitable for cattle-, sheep- and goat stables!**

## LESS DUST POLLUTION IN THE BARN & HEALTHIER BARN CLIMATE

### **Strohmatic light 80 for an appropriate pig husbandry with a minimum of work effort**

A sophisticated system that will inspire you:

- Less mycotoxins for a better barn climate
- Minimum of work effort and maximum of time saving
- For distribution of activity material for enrichment or as litter for the lying area
- Tailored to your barn with a chain system with 80 mm or 200 mm diameter
- Automatic dedusting of the straw for an improved animal health - **Patent pending**
- The distribution points of your barn will be supplied automatically with chopped straw via storage boxes with a volume of 15 liters each
- Automatic straw distribution throughout the whole barn

**FOR THE AUTOMATIC DEDUSTING OF THE STRAW FOR MORE ANIMAL HEALTH, AN OWN SOLUTION HAS ALREADY BEEN DEVELOPED AND PATENTED!**

**COST EFFECTIVE, EFFICIENT & AUTOMATIC STRAW DISTRIBUTION FOR AN APPROPRIATE PIG HUSBANDRY!**

# THE PERFECT SOLUTION FOR YOUR ANIMALS

## AN INNOVATIVE COORDINATED OVERALL SYSTEM

### ► Straw preparation for automatic cattle feeding

The perfect complement to littering for cattle farming is the ability to prepare the straw for cattle feeding robots.

This means that the ideal proportion of crude fiber can always be provided in the ration.

This especially is perfect for the health of the animals.

### ► For littering in particularly animal-friendly pig husbandry

With Strohmatic the littering work can also be automated in pig farming with straw housing systems.

Additionally, the fresh straw significantly improves the well-being of the pigs and allows free intake of crude fiber and the animals' rooting instinct.

### ► Strohmatic littering system

For pulping, chopping, dedusting and automatic distribution of straw in required quantities.

- System proven for years
- For animal welfare
- Saves more than 50 % of straw and working time
